## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. **Claims 1-14**, drawn to a method of applying electrical energy to tissue, classified in class 606, subclass 34.
- II. **Claims 15-17**, drawn to a method of creating a plasma in a body lumen using a platinum active electrode, classified in class 604, subclass 500.
- III. **Claims 18-26 and 36** drawn to a system for applying electrical energy to tissue at a target site, classified in class 606, subclass 41.
- IV. **Claims 27-32**, drawn to a method of applying electrical energy to tissue wherein the active electrodes have a temperature below 100 degrees centigrade, classified in class 604, subclass 500.
- V. **Claims 33**, drawn to a method for applying electrical energy to tissue wherein the conductive fluid comprises of .1% to .85% sodium chloride, classified in class 604, subclass 500.
- VI. **Claims 34-35**, drawn to a method for applying electrical energy to tissue wherein the active electrode is maintained at least 1.0 mm away from tissue, classified in class 604, subclass 500.

The inventions are distinct, each from the other because of the following reasons:

Inventions **III** and **[I, II, IV, V, VI]** are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1)

the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product in Group III can be used in a materially different process of using that product.

Inventions **[I, II, IV, V, VI]** are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the Groups in question have different modes of operation and effects, and therefore, should be considered different inventions.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel A. Mendez whose telephone number is 571-272-4962. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nicholas D. Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
